

ture of refined ease and luxury.

THE COLUMBUSSEWER PIPE COMPANY.

A prominent feature and novelty of the fair is noticeable in the "Sewer Pipe Fountain," erected and manufactured by the Columbus Sewer Pipe Company. This beautiful structure is twenty feet high, and comprises specimens of all the many curious shaped branches, connections, etc., that are practical in trade, and are so tastefully and ingeniously arranged and connected with the water works as to form a novel and magnificent fountain. This unique design is by Superintendent Wassall, to whom great praise is due. This firm ranks among the most successful and fast growing in our city, which, no doubt, is mainly attributable to their excellent stoneware, coupled with the indefatigable and business tact of the President, B. F. Rees, Esq. They also exhibit a variety of other articles made from the same clay, among which are lawn chairs, filters, fence-posts, etc.
